                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       뮍
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention relates to a transformant having been modified so CC as to produce a secondary metabolite. The secondary metabolite has a CC benzene ring skeleton free from substitution at the para-position by a CC nitrogen-containing functional group, thereby enabling the production of a secondary metabolite with a benzene ring skeleton substituted at the CC para-position by a nitrogen-containing group. The transformant organism CC of the present invention has been produced by transferring a gene CC participating in the biosynthesis pathway from chorismic acid into participating in the biosynthesis pathway from chorismic acid into participating acid mutase (papB), from Streptomyces CC 4-aminophenylpyruvic acid, and so the papB gene can be used to produce the transformant of the present invention. The transformant can be used to produce metabolites for application in pharmaceuticals, CC veterinary drugs and agrochemicals
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention relates to transformants capable of producing PF1022 substance derivatives. These were obtained by transferring a gen participating in the biosynthesis pathway from chorismic acid to paminophenylpyruvic acid (biosynthesis gene) into a phenylalanine-requiring host derived from an organism producing the PF1022 substance. The transformants are producing PF1022 substance derivatives by fermentation, for use as pharmaceuticals or veterinary drugs. The prese sequence is a substance PF1022 coding sequence from Streptomyces

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             the invention is useful for producing at least one protein comprising at least one unnatural amino acid. The protein is the Aspl2TAG mutant of chloramphenicol acetyltransferase (CAT), the Tyr163TAG mutant of mouse dihydrofolate reductase (DHFR), or a Tyr163TAG mutant of mouse dihydrofolate reductase comprising CHOOH His6tag. The unnatural amino acid is provided exogenously. The translation system is a cell and the unnatural amino acid is biosynthesised by the cell. The present sequence represents a plasmid containing the individual genes papABC that encode the enzymes used to carry out the conversion of chorismate to the unnatural amino acid p-aminophenylalanine (pAF)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to a novel composition comprising a translation system comprising an orthogonal tRNA (O-tRNA) and an orthogonal aminoacyl tRNA synthetase (O-RS), where the O-RS preferentially aminoacylates the O-tRNA with at least one unnatural amino acid in the translation system
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          and the O-tRNA recognises at least one selector codon.                                                                                                                                                                                                                                                                                                  The invention relates to a novel composition comprising a translation system comprising an orthogonal tRNA (O-tRNA) and an orthogonal aminoacyl tRNA synthetase (O-RS), where the O-RS preferentially aminoacylates the O-tRNA with at least one unnatural amino acid in the translation system and the O-tRNA recognises at least one selector codon. A composition of the invention is useful for producing at least one protein comprising at least one unnatural amino acid. The protein is the AsplZTAG mutant of chloramphenicol acetyltransferase (CAT), the Tyr163TAG mutant of mouse dihydrofolate reductase (DHFR), or a Tyr153TAG mutant of mouse dihydrofolate reductase comprising CHOOH His6tag. The unnatural amino acid is biosynthesised by the cell. The present sequence represents a plasmid for use in the biosynthesis of p-aminophenylalanine
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Schultz

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Ś
                                                                                                                                                                                                                                                                             The papA and papM genes of S.pristinaespiralis are involved in the biosynthesis of 4-dimethylamino-L-phenylalanine (DMPAPA), a precursor for pristinamycin IA. The region between these two genes was sequenced and two open reading frames were identified. The first (papC) was on the complementary strand and decodes to an amino acid sequence with homology to the region of E.coli TyrA which has been implicated in aromatisation reactions. The PapC gene product is likely to be involved in a similar aromatisation of 4-deoxy 4-amino prephenate to give 4-amino phenylpyruvate during DMPAPA synthesis. The second open reading frame (papB) could be decoded to give a product with homology to the region of TyrA which has chorismate mutase activity. The PapB gene product is cleavy 4-aminoprephenate acid. Disruption of the papB and papC genes can be used to produce strains of S.pristinaespiralis which are unable to produce the antibiotic pristinamycin I but which may be able to produce con the produce of the produce of the produce of the produce of the produce of the produce of the produce of the produce of the produce of the produce of the produce of the produce of the produce of the produce of the produce of the produce of the produce of the produce of the produce of the produce of the produce of the produce of the produce of the produce of the produce of the produce of the produce of the produce of the produce of the produce of the produce of the produce of the produce of the produce of the produce of the produce of the produce of the produce of the produce of the produce of the produce of the produce of the produce of the produce of the produce of the produce of the produce of the produce of the produce of the produce of the produce of the produce of the produce of the produce of the produce of the produce of the produce of the produce of the produce of the produce of the produce of the produce of the produce of the produce of the produce of the produce of the produce of the produce of the produce of the produce of the produ
                                                                                                Query Match

The PapC gene product is likely to be involved in a similar aromatisation of 4-deoxy 4-amino prephenate to give 4-amino phenylpyruvate during DWPAPA synthesis. The second open reading frame (papB) could be decoded to give a product with homology to the region of TyrA which has chorismate mutase activity. The PapB gene product is likely to catalyse the isomerisation of 4-deoxy 4-amino chorismate to 4-deoxy 4-aminoprephenate. Disruption of the papB and papC genes can be used to produce strains of S.pristinaespiralis which are unable to produce the antibiotic pristinamycin I but which may be able to produce
